

Strategy Conquest - Product Documentation & Player Guide

Strategy Conquest is a turn-based tactical strategy game where two players compete to expand their empires, manage resources, and eliminate their opponents through military conquest. This document serves as the official guide covering game features, rules, and user interface navigation.

1. Game Overview and Objective

You step into the role of a military commander on a 2D grid-based map. You begin with designated cities and a starting units.

Victory Condition: The goal of the game is complete domination. You win the game immediately if your opponent loses control of all their cities.

2. Game Modes

The game supports two primary modes of play, accessible directly from the Main Menu:

- **Local Game (Versus Computer):** Play a single-player match against an automated AI opponent. The AI automatically calculates its moves and purchases during its turn.

- **Multiplayer Game:** Play against another human player over a local network or the internet.
 - *Hosting:* One player selects "Create Game" and specifies a port (e.g., 4444).
 - *Joining:* The second player enters the host's IP address (or localhost if on the same machine) and the matching port, then selects "Join Selected Lobby".

3. Core Mechanics

Economy and Cities

Your empire runs on **Gold**. Your total balance is displayed in the side panel.

- **Income:** Every city you own automatically generates gold at the end of your turn.
- **Upgrading Cities:** You can spend gold to upgrade your cities. Upgraded cities have higher developmental tiers and yield better strategic advantages.

- **Capturing Cities:** To capture an enemy or neutral city, you must successfully move one of your military units onto the tile containing the city.

Military and Combat

You use gold to purchase military units. Units are recruited directly into your cities, provided the city tile is not currently blocked by another unit.

Available Unit Types:

1. Militia
2. Infantry
3. Cavalry
4. Artillery

Unit Actions:

- **Movement:** Units can move a specific number of tiles per turn. Movement is calculated using a grid-based pathfinding system that prevents moving through tiles occupied by other units.

- **Attacking:** A unit can attack an enemy within its attack range. Once a unit attacks, its turn is immediately exhausted (it cannot move after attacking).

- **Healing:** Units that end their turn stationed on a city owned by you will automatically recover a percentage of their maximum health at the start of your next turn.

Next Turn

4. User Interface and Controls

The Main Menu

- **Player Name:** You must enter a valid player name before starting. *Note for Multiplayer:* Your name must exactly match one of the player names defined in the host's level configuration file.

- **Console Logging:** A toggle is provided to enable or disable background diagnostic logs for troubleshooting.

The Game Board

- **Selection:** Click on any tile to select the entity on it. If a tile contains both a City and a stationed Troop, the side panel will provide a "Switcher Box" allowing you to toggle your selection between the two.

- **Overlays:** When a unit you own is selected:
 - A **selection ring** appears under the unit.
 - **Move circles** will highlight all tiles the unit can legally move to.
 - **Attack circles** will highlight any enemy units currently within striking range.
- **Deselect:** Press the ESC key to clear your current selection or click empty tile.

The Side Panel

The right-hand side of the screen provides your command center:

- **Match Info:** Displays the current turn holder and the gold balances for all players.
- **Entity Info:** Displays detailed statistics (HP, Damage, Movement status) of the currently

selected unit or city.

- **Action Menu:** If you select a city you own, buttons will dynamically appear here allowing you to upgrade the city or purchase units.
- **Next Turn:** Click this button when you have finished issuing your commands to pass control to your opponent. This button is disabled when it is not your turn.
- **Game Management:** Contains buttons to "Save Game" (exports the current state to a JSON file) or "Quit Game" (forfeits the match).
